RE: Annual Water Quality Data for the Consumer Confidence Report
Calendar Year 2012

Enclosed is the water quality data, collected by the Authority, for the Consumer Confidence Report / Calendar Year 2012. In addition to the water quality data, the Authority has included information about our source water, and the FDEP Source Water Assessment Project.

This submittal is generic in content, so that one version can be distributed to all the Authority's wholesale customers. This submittal contains all the required data that meets the rule criteria for the reporting year 2012. Also the Authority elected to include all contaminants, even though they are not required to be reported.

Should you require additional information about this submittal please contact me by phone at 863-491-7567 or email ssstone@regionalwater.org.

The Peace River Manasota Regional Water Supply Authority
For The Following Utilities Served

AQUA UTILITIES FLORIDA
CHARLOTTE COUNTY UTILITIES
DESOTO COUNTY UTILITIES
NORTH PORT UTILITIES
SARASOTA COUNTY UTILITIES

January 22, 2013

SOURCE OF SUPPLY

The Peace River Manasota Regional Water Supply Authority (Authority), uses as its source of supply, surface water from the Peace River. The Peace River is a large river by Florida standards, having a drainage area of 2300 square miles. The Peace River headwaters originate in the Green Swamp of northern Polk County, flowing through Lake Hancock, Winter Haven chain of lakes, and Lake Hamilton. The mouth of the Peace River is located at Punta Gorda, 120 miles downstream from the headwaters, delivering needed fresh water to the Charlotte Harbor estuary.

The Florida Department of Environmental Protection has conducted Source Water Assessments for all public water systems in Florida. These assessments will identify and assess any potential sources of contamination in the vicinity of your water supply. A Source Water Assessment Report for our system was completed in 2005 and is available at the DEP Source Water Assessment and Protection Program web site: <http://www.dep.state.fl.us/swapp>

Water Treatment Information

The Peace River Regional Water Supply Facility (Facility) is authorized to withdraw water from the Peace River by a water use permit issued by the Southwest Florida Water Management District. This permit includes a diversion schedule that determines when withdrawals can occur and the amount of river water that can be withdrawn by the Facility. When the river flow is high during the wet season the Facility will withdraw river water and store that water in an off-stream surface water reservoir. During dry periods the Facility will rely on stored reserves from the reservoir. The Facility pumps water from the reservoir on a daily basis for treatment and distribution to the public. The treatment process includes the addition of powdered carbon for the removal of algal taste and odor compounds, followed by color removal (coagulation and sedimentation) with alum, disinfection with chlorine and chloramines, filtration by rapid rate multi-media filters and pH adjustment with caustic soda before being distributed to the public.

UTILITY OWNER INFORMATION

If you have any questions about drinking water quality, provided by the Peace River Manasota Regional Water Supply Authority (Authority) in this Consumer Confidence Report, Annual Drinking Water Quality Data please contact Samuel S. Stone, Land and Environmental Services Manager by phone at 863-491-7567 or by e-mail at sstone@regionalwater.org. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled Board of Directors meetings. These meetings are typically held on the first Wednesday of every other month. The meeting locations rotate between the County Commission Chambers of Charlotte, Desoto, Manatee, or Sarasota Counties at 9:30 am. For information on a specific meeting, please contact the Authority Administrative office by phone at 941-316-1776 or log on to our web site at www.regionalwater.org

DATA PERIOD

The Peace River Manasota Regional Water Supply Authority, routinely monitors for constituents in your drinking water, according to Federal and State regulations. The following document provides water quality test results for the period of January 1st to December 31st, 2012. These same regulations require monitoring to occur in 9 year compliance cycles, made up of three, three year compliance periods. These three year compliance periods result in some contaminants being monitored once every three years, and may require some contaminant test results to be reported in this document from years other than calendar year 2012.

All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember, that the presence of these constituents does not necessarily pose a health risk.

Please note that it is not required, but the Authority has provided all chemical contaminant test results during this period.

PRIMARY INORGANIC CONTAMINANTS

These contaminants are required to be tested annually. Test results are for the period 1/1/12 – 12/31/12. Test results for the above contaminants resulted in **no violations**. Please note that Fluoride is a listed contaminant under the Primary Inorganic Contaminant list and the Secondary Drinking Water Standards list. Results for Fluoride therefore, is listed in the secondary drinking water standards section and this section of the report.

Note 1. If Arsenic levels are above the MCL then special health effects language is required.

DATA QUALIFIERS THAT MAY APPLY:

- I = Reported value is between the laboratory MDL and the PQL. (PQL = 4 x MDL).
- J = Estimated value.
- J3 = Est. value quality control criteria for precision or accuracy not met.
- J4 = Est. value. Sample matrix interference suspected.
- Q = Sample held beyond accepted holdtime.
- U = Analyte analyzed but not detected at the value indicated.

NOTES:

V = Analyte detected in sample and method blank Results for this analyte in associated samples may be biased high. Standard. Duplicate and Spike values are within control limits. Reported data are usable
 MBAS calculated as LAS; molecular weight = 348.
 X = Value exceeds MCL.

For questions and comments regarding these results, please contact Bettina Belfuss at (941) 723-9986

Results relate only to the samples.

VOLATILE ORGANIC CONTAMINANTS

These contaminants are required to be tested quarterly at the beginning of each 9 year cycle (2011) and subsequently tested annually. Test results are for the period 1/1/12 – 12/31/12. Test results for the above contaminants resulted in **no violations**.

TURBIDITY MONITORING

The monitoring of turbidity occurs at least 6 times per day as required by the regulations. The data provided represents the turbidity from the combined filtered water location at the Peace River Regional Water Supply Facility. Test results are for the period 1/1/12 - 12/31/12. The Peace River Facility combined filtered water turbidity never exceeded the MCL of 1.0 and did not fail to meet on a monthly basis, the requirement of less than or equal to .3 level at least 95% of the time.

MICROBIOLOGICAL CONTAMINANTS

Total Coliform Bacteria and E. Coli Bacteria

These contaminants are required to be collected on a monthly basis. Test results are for the period 1/1/12 - 12/31/12. Test results for these parameters resulted in **no violations**. The highest number of positive results for any month during this reporting period is one. For the year, 163 total samples were collected with one positive sample for Total Coliform.

Peace River Facility Microbiological Summary Table 2012

Months	Total Number of Samples Collected	Number of Positive Total Coliform Samples	Number of Positive E. Coli Samples
January	12	0	0
February	15	0	0
March	12	0	0
April	12	0	0
May	12	0	0

November	19	0	0
December	16	0	0
Total	163	1	0

MAXIMUM RESIDUAL DISINFECTION LEVEL

As a result of the Disinfection/Disinfection By-Products Rule (effective 1/1/02) the Authority is required to monitor disinfection levels in the distribution system to ensure that the annual average residual of 4.0 mg/l is not exceeded. Test results provided are for the period 1/1/12-12/31/12 and result in **no violations**.

Peace River Facility Maximum Residual Disinfection Level Results

See Summary Table Attached

DISINFECTANT RESIDUAL COMPLIANCE SUMMARY												
Last 12 Months	1	2	3	4	5	6	7	8	9	10	11	12
Actual Month/Year	Jan-12	Feb-12	Mar-12	Apr-12	May-12	Jun-12	Jul-12	Aug-12	Sep-12	Oct-12	Nov-12	Dec-12
Provide the number of disinfectant residual samples taken each month of the last quarter (include disinfectant residual samples taken for all total coliform samples, including repeat or additional total coliform samples)*	12	15	12	12	12	15	12	15	11	12	19	16
Provide the monthly arithmetic average of all samples taken in each month for the last 12 months (include disinfectant residual samples taken for all total coliform samples, including repeat or additional total coliform samples)	3.44	3.64	3.59	3.56	3.53	3.57	3.77	3.77	3.83	3.81	3.83	3.74
Calculate the Running Annual Average (RAA) (i.e., calculate the arithmetic average of the monthly averages for the last 12 months)												
Does the RAA violate the Maximum Residual Disinfectant Level of 4.0 mg/l? (YES/NO)												
*Also, for each disinfectant residual sample taken each month of the last quarter, provide the information requested in the table on page two of this format.												

Total Organic Carbon (TOC)

The Stage I D/DBP Rule effective 1/1/02 as it relates to Sub Part H systems requires these contaminants to be tested monthly for the raw and finished water as paired samples to determine the treatment facility's on going per cent removal and removal ratio of TOC during treatment. Test results are for the period 1/1/12 – 12/31/12 on finished and raw untreated water at the Peace River Facility.

Peace River Facility TOC Removal Results

See Summary Table Attached

TOTAL ORGANIC CARBON (TOC) ANNUAL REMOVAL SUMMARY

Actual Month/Year	By Month for Past 12 Months											
	1	2	3	4	5	6	7	8	9	10	11	12
Number of Paired (Source Water and Treated Water) TOC Samples Collected	1	1	1	1	1	1	1	1	1	1	1	1
Raw Water TOC Monthly Arithmetic Average	19.1	19.1	15.8	13.7	13.3	12.2	12.9	17.6	17.7	18	18.2	16
Treated Water TOC Monthly Arithmetic Average	4.11	4.27	4.02	4.52	4.14	3.94	3.91	5	4.56	5.15	4.98	4.26
Actual % TOC Removed *	78	78	75	67	69	68	70	72	74	71	73	73
% TOC Removed Quarterly Arithmetic Average			77			68			72			72
% TOC Removed 12 Month Running Arithmetic Average						72			72			72
Required % Removal	50	50	50	50	50	50	50	50	50	50	50	50
Monthly Actual/Required Ratio	1.57	1.55	1.49	1.72	1.68	1.88	1.68	1.43	1.50	1.43	1.45	1.47
Quarterly Average of Actual/Required Ratio			1.538			1.757			1.552			1.449
Running 12 Month Actual/Required Ratio												1.574

Does the system meet the enhanced coagulation or enhanced softening % removal requirements in 40 CFR 141.135(b) (2) or (3) for the past four quarters? (Yes/No)	YES
---	------------

* Attach calculations for determining compliance with the TOC percent removal requirements, as provided in 40 CFR 141.135(e)(1). 40 CFR 141.135(3)(1), TOC removal requirements that are found in 40 CFR 141.135(e)(1) are calculated using the following formula:

$$(1 - 5.15 / 18.0) \times 100 =$$

$$(1 - \text{Treated water TOC} / \text{source water TOC}) \times 100 = \text{Actual M} (1 - 4.98 / 18.2) \times 100 =$$

$$\text{Removal Ratio} = \text{Calculated Monthly TOC \% Removal} / \text{Required} (1 - 4.26 / 16) \times 100 =$$

**TOTAL TRIHALOMETHANES (TTHM)
AND
TOTAL HALOACETIC ACIDS (HAA 5)**

These contaminants are required to be tested annually on a quarterly frequency with compliance determined on a running annual average. Test results are for the period 1/1/12 – 12/31/12 and have resulted in **no violations**.

Does the RAA for HAA5s violate the Maximum Contaminant Level of 0.060 mg/L for HAA5s? (YES/NO)	NO				Does the RAA for HAA5s violate the Maximum Contaminant Level of 0.060 mg/L for HAA5s? (YES/NO)	NO			

*Also, for each sample taken during the last quarter, provide the information requested in the tables on pages 3 and 4 of this format

**NITRATE NITROGEN
And
NITRITE NITROGEN**

These contaminants are required to be tested annually on a quarterly frequency. Test results are for the period 1/1/12 – 12/31/12 and have resulted in **no violations**.

**Peace River Facility
Nitrate and Nitrite Summary Table
2012**

Sample Date	Nitrate Results (mg/l)	Nitrite Results (mg/l)
First Quarter	.326	.041
Second Quarter	.060	.041
Third Quarter	.098	.041
Fourth Quarter	.261	.041

DATA QUALIFIERS THAT MAY APPLY:

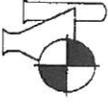

- I = Reported value is between the laboratory MDL and the PQL. (PQL = 4 x MDL).
- J = Estimated value.
- J3 = Est. value quality control criteria for precision or accuracy not met.
- J4 = Est. value. Sample matrix interference suspected.
- Q = Sample held beyond accepted holdtime.
- U = Analyte analyzed but not detected at the value indicated.

NOTES:

- V = Analyte detected in sample and method blank. Results for this analyte in associated samples may be biased high. Standard. Duplicate and Spike values are within control limits. Reported data are usable.
- MBAS calculated as LAS; molecular weight = 348.
- X = Value exceeds MCL.

For questions and comments regarding these results, please contact Bettina Beilfuss at (941) 723-9986

Results relate only to the samples.

TREATMENT TECHNIQUES

In lieu of a MCL, Federal and State regulations allow that some contaminants be limited during the treatment of water. The Utility may therefore, use these limitations through documented certification on an annual basis.

RE: Acrylamide and Epichlorohydrin levels in EK 102 PWG Polymer

Dear Sirs:

This letter is to certify that limits on levels of the above contaminates are as follows:

Acrylamide – less than 0.005% at 1 ppm in accordance with NSF standards

Epichlorohydrin – none at 1 ppm in accordance with NSF standards

All of our products comply with ANS/NSF standard 60 drinking water treatment chemicals. If you have any questions, please let us know.

Sincerely yours,

Kenneth E. DeGarmo
President
KED Group, Inc.

Synthetic Organic Chemicals

These contaminants are required to be tested semi-annually every three years. Test results are for the period 1/1/11 – 12/31/11. These test results are from the most recent testing done in accordance with State and Federal regulations and **no violations or detections** occurred during this period.

**LEAD
And
COPPER**

These contaminants are required to be tested annually every three years. Test results are for the period 1/1/11 – 12/31/11. These test results are from the most recent testing done in accordance with State and Federal regulations. **No violations** occurred during this period and 100% of the samples for both lead and copper were below the action level.

DATA QUALIFIERS THAT MAY APPLY:

I = Reported value is between the laboratory MDL and the PQL. (PQL = 4 x MDL).
 U = Analyte analyzed but not detected at the value indicated.

NOTES:

MBAS calculated as LAS; molecular weight = 348.
 X = Value exceeds MCL.
 Radium 226/228 and Uranium added per client request.

For questions and comments regarding these results, please contact Bettina Beifuss at (941) 723-9986

Results relate only to the samples.

**UNREGULATED GROUP I, GROUP II
AND
GROUP III CONTAMINANTS**

The Group I contaminants were required to be tested quarterly for one year only. The Group II contaminants were required to be tested annually every three years and the testing requirement expired in the year 2000. The Group III contaminants are required to be tested once. Test results are available from a previous period of time. This period does not fall into the acceptable reporting period for the 2012 Consumer Confidence Report, and therefore will not be provided here with other 2012 data.

RADIOACTIVE CONTAMINANTS

These contaminants are required to be tested on a routine basis quarterly every three years. Test results are for the period 1/1/11 – 12/31/11. These test results are from the most recent testing done in accordance with State and Federal regulations and **no violations** occurred during this period. Due to low levels found with the contaminant gross alpha, additional testing for other contaminants such as radium 226 or radium 228 is not required, but was tested on a voluntary basis anyway.
